DETAILED ACTION

Allowable Subject Matter

1. Claims 11-19, 21-24 are allowed over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

As per the independent claims, the claim limitations pertaining to performing a multiplication of the values of each code book-code table by a first factor smaller than one, and repeating the multiplication until all elements are located in the available range of values; and causing a number of repeated multiplications to be used as a scaling factor for all code book-code table entries, if the available range of values is exceeded. With respect to the prior art of record, neither the Fette, Gersho nor Tzeng) teach the feature of storing speech signals in quantized form in code books/tables, in which the speech signals are HXVC, LPC coefficients, spectral envelopes and unvoiced segments with such a scaling factor. (Gersho only refers to a harmonic coder where LP residuals and spectral magnitudes are quantized, but is completely silent about using a scaling factor as provided for in the context of the claimed subject matter of claims 11, 20 and 21). Furthermore, it would not have been obvious to one of ordinary skill in the art of speech signal processing to modify the teachings of the prior art to obtain the recited claim limitations of the independent claims as noted above.
